JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Measures of local sanitation.

Under date of March 22, 1907, the governor of the island directs that all premises on which a case of yellow fever has occurred shall be fumigated. All water containers are required to be covered with wire gauze, and all standing water shall be kept covered with a thin film of oil or stocked with mosquito-destroying fish. Premises shall be kept free from old cans, boxes, shells, etc.; pits shall be cleaned and disinfected or oiled, and drain pipes and gutters from roofs of houses shall be kept clean and in good order.
